

CREST GATES

The Nation's Largest Hydraulically-Operated Crest Gate System, Tempe, Arizona

Steel-Fab designed and supplied eight 106 ft. x 22 ft. crest gates to PCL Construction in Phoenix for the Tempe Town Lake Downstream Dam Replacement Project located in Tempe, Arizona. The crest gates replaced the rubber dams on the lake's west end, holding back 977 million gallons of water. Since opening in 1999, the Tempe Town Lake has become a major attraction in the city, with an estimated economic impact of roughly \$1.5 billion.
